

MOHAMMED TANZEEL ALAM

Senior devops engineer

9972733445

Bengaluru, KA 560032

tanzeelalam@gmail.com

Professional Summary

Senior DevOps Engineer experienced in designing and operating enterprise CI/CD platforms, infrastructure automation solutions, and cloud-native deployment environments. Background spans traditional on-premises infrastructure, virtualization platforms, and modern cloud ecosystems, with expertise in Azure DevOps, AWS, Terraform, Kubernetes, and platform reliability engineering.

Technical Profile

Cloud Platforms: AWS, Azure	CI/CD & DevOps: Azure DevOps, Jenkins
Infrastructure as Code: Terraform, Ansible	Containers & Orchestration: Docker, Kubernetes
Monitoring & Observability: Azure Monitor, Grafana, CloudWatch	Virtualization & Compute: Hyper-V, Proxmox, VMWare
Programming & Automation: Python, Shell, Groovy, C++, Qt/QML	Additional Technologies: LLMs, Prompt Engineering

Certifications

- AWS Solutions Architect Associate
- AWS Certified AI Practitioner
- Azure AZ 900

Work history

SENIOR DEVOPS ENGINEER , 05/2025 - 05/2026 Persistent Systems Ltd , Bangalore Cloud-Native CI/CD Modernization - Migrated legacy on-premises Jenkins/Proxmox CI/CD platform to Azure DevOps, improving scalability, security, and operational efficiency. - Designed cloud-native CI/CD architecture using Azure DevOps Pipelines, Azure Repos, and Azure Artifacts for source control, build automation, and artifact management. - Implemented Infrastructure as Code (IaC) using Terraform to provision and manage Azure resources consistently across environments. - Built scalable self-hosted build infrastructure using Azure Virtual Machine Scale Sets (VMSS) with ephemeral build agents. - Managed secrets, certificates, and deployment credentials through Azure Key Vault and Managed Identities. - Established centralized monitoring and observability using Azure Monitor, Log Analytics Workspace, alerts, and dashboards. - Automated application deployments across Development, QA, UAT, and Production environments through Azure DevOps release pipelines. - Implemented secure networking using Azure Virtual Networks (VNet), Network Security Groups (NSG), and private access patterns.
--

- Created reusable CI/CD templates and deployment standards to improve consistency across multiple projects.
- Optimized build scalability, resource utilization, and deployment reliability through automated agent scaling and cloud-native services.

DEVOPS ENGINEER, 02/2024 - 05/2025

Persistent Systems Ltd, Bangalore

Enterprise Build Automation Platform

- Designed and maintained enterprise CI/CD pipelines using **Jenkins**, supporting automated build, test, packaging, code signing, and release workflows.
- Built a **dynamic build agent infrastructure** using **Proxmox VE**, provisioning ephemeral Windows/Linux VMs from golden templates for every build execution.
- Automated VM lifecycle management through **Proxmox REST APIs**, including template cloning, agent registration, health checks, and post-build cleanup.
- Developed reusable **Jenkins Shared Libraries (Groovy)** to standardize pipeline orchestration, agent provisioning, error handling, retries, and notifications.
- Integrated source control systems (Git), build tools, package managers, and security scanning solutions into CI/CD workflows.
- Implemented automated artifact generation, storage, and distribution for software releases.
- Managed secrets and credentials for build agents, infrastructure APIs, and deployment processes.
- Configured monitoring, build notifications, and reporting through email and collaboration platforms.
- Reduced infrastructure costs and improved build isolation through ephemeral agent provisioning and automated resource cleanup.

DEVOPS ENGINEER, 07/2023 - 01/2024

Persistent Systems Ltd, Bangalore

AWS IoT Device Monitoring Architecture

- Designed and implemented an IoT device monitoring platform using **AWS IoT Core** to collect real-time temperature and health telemetry from network-connected printer devices.
- Developed MQTT-based communication workflows and IoT Rules to process and route telemetry data for monitoring and analytics.
- Implemented automated threshold-based alerting to identify abnormal device temperatures and potential hardware issues.
- Built operational dashboards using **CloudWatch/Grafana/QuickSight** to provide real-time visibility into device health, performance, and fleet status.
- Leveraged **AWS Lambda, DynamoDB**, and **CloudWatch** to enable scalable telemetry processing, storage, monitoring, and alerting.

PRINCIPAL ARCHITECT, 03/2013 - 06/2023

Persistent Systems Ltd, Bangalore

Client: Radia Client Automation (Formerly known as HP client automation)

RCA is an endpoint management solution that provides a unified, scalable, and cost-effective way for organizations to manage devices across various platforms and device types.

- Contributed to the modernization of a legacy **MFC/C# endpoint management console** by migrating key functionality to a **Qt/QML-based cross-platform architecture**, improving maintainability, extensibility, and user experience while supporting strategic customer acquisition initiatives.

- Designed and delivered an **OS deployment solution** enabling automated provisioning of **Windows 10/11 images** across enterprise-managed endpoints without requiring additional third-party licensing, contributing to a multi-million-dollar enterprise contract with a major financial institution.
- Participated in the development of a **peer-to-peer content distribution framework** for software packages, patches, and operating system images, reducing WAN bandwidth consumption by more than **60%** and improving deployment efficiency across geographically distributed environments.
- Investigated and resolved critical production incidents affecting large enterprise customers by performing root-cause analysis, implementing corrective fixes, and restoring endpoint management services under strict operational timelines.
- Developed and integrated **remote desktop management capabilities (VNC-based)** into the endpoint management platform, enabling secure remote administration and troubleshooting of managed devices, leading to increased adoption among enterprise customers.
- Worked on a scalable endpoint lifecycle management platform supporting **software distribution, operating system deployment, patch management, remote administration, inventory collection, and policy-based device management** across large enterprise environments.

SENIOR SYSTEMS ENGINEER, 07/2011 - 03/2013

Hewlett Packard, HP, Bangalore

- Engaged directly in customer calls to understand pain points and represent engineering team.
- Resolved 50+ urgent customer issues, including both new feature requests and legacy system problems.
- Recognized as leading engineer in support team for timely hotfixes and updates.

SENIOR SYSTEMS ENGINEER, 11/2007 - 07/2011

Siemens Healthcare, Bangalore

- Contributed to the development of a high-value feature called Hemo Worksheet.
- Recognized for resolving a critical blocker issue related to Daylight Saving Time.
- Recognized for submitting two invention disclosures: "MOCESTA (2008E17572 IN)" and "UKey (2008E10739 IN)."

SOFTWARE ENGINEER, 07/2005 - 11/2007

ICope Technologies, Bangalore

- Involved in revamping the MFC application's UI which added approx 10% to the client base.
- Involved in 30+ customer cases and bug fixing.

Accomplishments

- Earned "Star" award for handling customer requirements efficiently with a small sized team of 2.
- Received 8 "High Five" Awards for individual contributions.
- Awarded 5 Team Awards across projects.
- Earned multiple customer appreciations and recommendations across projects.
- Received 2 Bug-Hunt Awards.
- Filed 2 Invention disclosures "MOCESTA (2008E17572 IN)" and "UKey (2008E10739 IN)."

Education

Master Of Science: Computer Science
Christ University - Bangalore, 07/2005
MCA (Master of Computer Applications)

Bachelor Of Science: Computer Science
Al-Ameen College - Bangalore, 07/2002
B.Sc Computer Science

Personal Details

Date of Birth: 03/09/1981

Marital Status: Married
